#### Background

Agencies responsible for reimbursement often request an evidence submission from companies to support decisions on the reimbursement of pharmaceuticals and medical devices. The EUnetHTA evidence submission template is a flexible tool that can be used by reimbursement agencies as the basis of a company's evidence submission for regional or national processes and for joint assessments. The scope of the EUnetHTA evidence submission template is relative effectiveness assessment (defined by the HTA Core Model for rapid relative effectiveness assessment as health problem and current use of the technology, description and technical characteristics of the technology, safety and clinical effectiveness). Therefore currently, it does not include pricing, health economics or budget impact issues, or other domains of the HTA CORE model.

The evidence submission template was developed for use with pharmaceuticals and medical devices, and these are in separate documents, though the majority of sections are common to both types of health technology. The evidence submission template does not specifically cover other health technologies such as diagnostic technologies, procedures or services, although some sections may also be relevant.

The evidence submission template does not replace agencies' existing methods and processes. The template is a flexible tool, that is, agencies should choose sections and questions that are relevant to their specific decision-making criteria. The evidence submission template is available as a 'Word' template and agencies can add, remove and adapt questions. Agencies should also customise the evidence submission template to add further explanatory text so that it reflects their requirements. To support agencies with the adaptation process this document has been produced. These adaptation notes highlight areas that agencies should consider when adapting the evidence submission template.

The adaptation notes also link the questions in the evidence submission template to the HTA CORE model assessment elements and also to the existing EUnetHTA methodological guidance that supports the production of HTA assessments. In some instances questions in the submission template relate one-to-one to questions in the HTA CORE model (for example questions relating to the health problem), in other instances multiple questions may relate to a single assessment element in the HTA CORE model (for example questions relating to features of the technology). A single question in the evidence submission template may also relate to multiple assessment elements in the HTA CORE model (for example questions template may also relate to multiple assessment elements in the HTA CORE model (for example additional template may also relate to multiple assessment elements in the HTA CORE model (for example questions). These differences reflect the different purposes of the evidence submission template and the HTA CORE model.

There are 2 versions of the evidence submission template that agencies can use to start the adaptation process. There is a 'long' version that includes all national evidence requirements from reimbursement agencies in Europe and a 'short' version

that includes only the most frequently requested information. The 'long' version of the evidence submission template contains more questions asking the company to describe the methodology of developing the submission (for example questions about study identification, critical appraisal and evidence synthesis) and therefore may be more suitable for agencies who do not do their own independent assessment. The 'short' version focuses on providing evidence (for example a list of studies and a summary of study results) and may be a suitable starting point for agencies that primarily use company submissions to support their own independent assessment of the technology. The adaptation notes include an index showing which questions are included in the short version of the evidence submission template. The 'short' version of the evidence submission template is currently used as the basis of the company submission in the EUnetHTA joint assessments.

#### Other documentation used to support reimbursement

The information requested in the evidence submission template should be used for assessments together with information from other commonly used documents, such as:

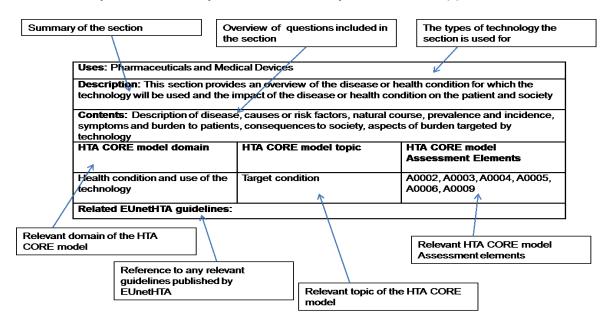

- Full text papers of cited articles.
- Clinical study reports, statistical plans and protocols.
- CE certificates and declarations of conformity.
- Instructions for use.
- User manuals and package inserts.
- Product diagrams, photographs, videos and samples.
- Draft or final regulatory documents (summary of product characteristics (SPC), Patient information leaflets (PIL), European public assessment reports (EPAR)).
- For products already on the market regulatory safety documents, such as periodic safety updates and other vigilance information.
- Research Information Systems (RIS)-files of references cited in the submission.

When adapting the evidence submission template, it is necessary to state which other documents are required. If there are restrictions about accepting unpublished and confidential data, or alternatively copyright issues with replicating published material, these should be highlighted in the adaption process.

To support health technology assessment EUnetHTA has produced a series of methodological guidelines and the HTA CORE model. These can be found at: <a href="http://www.eunethta.eu/eunethta-guidelines">http://www.eunethta.eu/eunethta-guidelines</a> and <a href="http://meka.thl.fi/htacore/">http://meka.thl.fi/htacore/</a> respectively. These sources may be useful to support the adaptation process and to provide guidance to companies completing the evidence submission template.

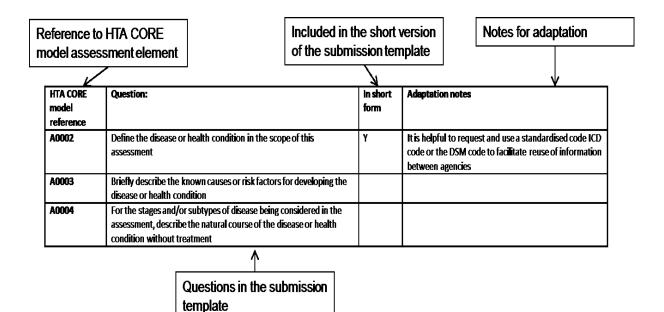

#### Using the adaptation notes

The evidence submission template and adaptation notes are divided into sections. A section includes a group of questions related to a particular theme. For each section there is a table in the adaptation notes that provides an overview of the section. This is designed to help agencies decide whether the questions are relevant to their decision-making. It also shows how the section relates to existing EUnetHTA tools. Assessment elements used in the relative effectiveness assessment (REA) application of the HTA CORE model are suffixed as '(REA)' with an indication of whether they are mandatory or non-mandatory for the REA application.

Some sections in the evidence submission template are for technologies that are already launched and available, for example extensions to the authorisation. These sections are highlighted in the 'uses' section of the above table.

Underneath the summary table there is a second table. The first column contains a link to any relevant HTA CORE model assessment elements, the second column provides a summary of the question in the evidence submission template, the third column shows whether the question is included in the short form version of the submission template. The final column includes adaptation notes.

In the submission template, notes for companies are written in *italics* highlighted in blue. Further italics can be added to provide information on the specific details or level of detail required by the company to meet the agency requirements. When adapting the submission template it is helpful to provide an overall idea of the length of the submission expected from the company and whether any questions should be considered either only briefly or in-depth.

As well as amending questions and sections, it is possible to rearrange sections and to add other sections to cover areas such as pricing, costs, budget impact, economic information and expert opinion. Tables are included in the template showing how information can be presented, but these can also be adapted.

|--------------------------------|--|------------------|--|
| -                              | Indicate the life span of the technology, and of any component parts, if applicable. Include the assumptions about frequency of use that support this. | Y                | In the short form this question is included in the section<br>'characteristics of the technology'. |
| -                              | Give details of the guarantees and warranties that<br>accompany the technology and its component parts,<br>including the guarantee period.             |                  |  |

# 2. Health problem and current clinical practice

WP7

21

#### 2.1 Overview of the disease or health condition

Uses: Pharmaceuticals and medical devices Description: This section provides a descriptive overview of the disease or health condition that is the subject of the assessment and the impact of the disease or health condition on the patient and society.

**Contents:** Definition of the disease or health condition, causes or risk factors, natural course of disease, prevalence and incidence, symptoms and burden to patients, consequences to society, aspects of burden targeted by the technology under assessment.

| HTA CORE model domain HTA CORE model topic |                  | HTA CORE model Assessment Elements                                       |  |  |
|--|------------------|--|--|--|
| Health condition and use of the            | Target condition | A0002 (mandatory REA), A0003 (Non-mandatory REA), A0004 (mandatory REA), |  |  |
| technology                                 |                  | A0005 (mandatory REA), A0006 (Non-mandatory REA), A0009                  |  |  |
| Related EUnetHTA guidelines:               | -                |  |  |  |

| HTA CORE<br>model<br>reference | Question:   | In short<br>form | Adaptation notes   |
|--------------------------------|---|------------------|--|
| A0002                          | Define the disease or health condition in the scope of this assessment.   | Y                | It is helpful to request and use a standardised code <i>ICD code or the DSM code</i> to facilitate reuse of information between agencies.  |
| A0003                          | Briefly describe the known causes or risk factors for developing the disease or health condition.   |                  |  |
| A0004                          | For the stages and/or subtypes of disease being considered in the assessment, describe the natural course of the disease or health condition without treatment.   |                  |  |
| A0006                          | Present an estimate of prevalence and/or incidence for the disease or health condition including recent trends.   | Y                | Indicate to companies whether there is a preference for the<br>estimates to come from national statistics or published<br>literature.<br>When using for joint or collaborative assessment indicate if<br>the prevalence or incidence is required across Europe or<br>within individual countries. Mark the scope of the countries<br>e.g. EU, EEA, Europe. |
| A0005                          | Describe the symptoms and burden of the disease or health condition for patients.   | Y                | This question considers the impact of the disease or health condition from the patient perspective.  |
| A0006                          | Describe the consequences of the disease or health condition for society.   |                  | This question considers the impact of the disease or health condition from a population perspective.   |
| A0009                          | Describe the aspects of the burden of disease that are targeted<br>by the technology, i.e. those that are expected to be reduced by<br>the use of the technology. | Y                |  |

#### WP7

# 2.2 Target population

| Uses: Pharmaceuticals and medi       | cal devices  |   |  |  |  |
|--------------------------------------|--|---|--|--|--|
| Description: This section describ    | es the company's proposed positic  | ning of their technology and target population e.g. this may be the population identified |  |  |  |
| in the authorisation or a target gro | oup of patients using the technology   | y for which the company wants reimbursement.  |  |  |  |
| Contents: Description and justific   | ation of the target population, size   | of target population, patient pathway of care with new technology.                        |  |  |  |
| HTA CORE model domain                | HTA CORE model domain HTA CORE model topic HTA CORE model Assessment Elements                  |   |  |  |  |
| Health condition and use of the      | Health condition and use of the Target population A0007 (mandatory REA), A0023 (mandatory REA) |   |  |  |  |
| technology                           |  |   |  |  |  |
| Related EUnetHTA guidelines:         |  |   |  |  |  |
| -                                    |  |   |  |  |  |

| HTA CORE<br>model<br>reference | Question:   | In short<br>form | Adaptation notes   |
|--------------------------------|---|------------------|--|
| A0007                          | Describe the target population and the proposed position of the target population in the patient pathway of care.   | Y                | Adapt this question to reflect whether a company should<br>submit for the whole population in the authorisation, the<br>whole population in the indication or if they may submit for a<br>subgroup of an indication. |
| A0007                          | Provide a justification for the proposed positioning of the technology and definition of the target population.   | Y                |  |
| A0023                          | Estimate the size of the target population. Include a description<br>of how the size of the target population was obtained and<br>whether it is likely to change (e.g. increase or reduce) over time. | Y                | When using for joint assessment indicate if the size of the target population is required across Europe or within individual countries. Mark the scope of the countries e.g. EU, EEA, Europe.                        |

### 2.3 Clinical management of the disease or health condition

| Description: This section descri   | bes the diagnosis and clinical mar   | nagement of the disease or health condition.   |  |  |
|------------------------------------|--|--|--|--|
|                                    | gement and diagnosis, issues, un<br>nt, alternatives to the technology,  | certainties, variations and unmet needs in clinical management, currently available justification of alternatives. |  |  |

|--------------------------------|--|------------------|---|
| A0001<br>A0018                 | Describe the experience of using the technology, e.g. the health<br>conditions and populations, and the purposes for which the<br>technology is currently used. Include whether the current use of<br>the technology differs from that described in the (expected)<br>authorisation. | Y                | For joint assessment define the level of detail required for<br>this question, e.g. major indications for which it is used<br>across Europe or a breakdown of the information on use<br>across individual countries.<br>Mark the scope of the countries e.g. Country of<br>application, EU, EEA, Europe, World. |
| A0011                          | Indicate the scale of current use of the technology, e.g. the<br>number of people currently being treated with the technology, or<br>number of settings in which the technology is used.   | Y                | For joint assessment define how this information should<br>be presented e.g. if the amount of existing use is required<br>across Europe or within individual countries<br>Mark the scope of the countries e.g. Country of<br>application, EU, EEA, Europe, World.   |
| A0011                          | Indicate how the scale of current use is expected to change in the future if the technology is introduced.   |                  |   |

27

#### 3.2 Reimbursement and assessment status of the technology

**Uses:** Pharmaceuticals and medical devices

Use only if the technology has been launched in a European country.

**Description:** This section provides information about the reimbursement status of the technology under assessment in the country of application and other countries. The section can also be used to collate recommendations from other health technology assessments that do not necessarily result in reimbursement.

**Contents:** Reimbursement status in Europe, indications, restrictions and level of reimbursement, date of decision, summary of reimbursement recommendations.

#### 4.3 Investments, disinvestments and changes in service organisation

 Uses: Pharmaceuticals and medical devices

 Description: This section describes the material investments and additional services, personnel and skills that need to be invested in, in order to introduce the technology (i.e. the resources not currently available but needed if the technology were to be introduced). It includes changes in service organisation that may result if the technology is introduced and also resources that are used currently but will no longer be needed if the technology is introduced

 Contents: Skills and training, employment of personnel, purchase of equipment and supplies, construction of infrastructure, changes to current services, resources no longer required.

### 5. Clinical effectiveness and safety

36

#### **5.1 Identification and selection of relevant studies**

#### **Uses:** Pharmaceuticals and medical devices

**Description:** This section is used to record the details of the literature search(es). If applicable, the same section can also be used to record the searches used to find studies of the comparators for evidence synthesis or safety studies if different criteria are used for the identification of safety studies.

**Contents:** Research question guiding searches, databases and registries searched, search dates, search terms and strategies, inclusion and exclusion criteria, PRISMA flow chart, methods for identifying ongoing and unpublished studies, citation hits.

http://www.eunethta.eu/outputs/eunethta-methodological-guideline-process-information-retrieval-systematic-reviews-and-healt

Therapeutic Medical Devices (under development)

#### General notes on using and adapting this section:

Consider whether systematic identification of both studies of the intervention and of the comparators is required for the assessment process and adapt the template text accordingly.

As well as copies of the search strategies the following appendices may also help review the searches and the robustness of the identification of the studies:

- List of studies excluded from the result of the searches of bibliographic databases (full text screening) with reason for exclusion.
- List of studies excluded from the search result from trial registries with reason for exclusion.
- RIS-Files of all references identified in the systematic searches of bibliographic databases and study registries.

Agencies who want to appraise a companies' network meta-analysis should also request this section on the process of identification of studies.

| HTA CORE                   | Question:   | In short | Adaptation notes  |
|----------------------------|---|----------|---|
| model<br>reference         |   | form     |   |

| Provide a flow chart showing the number of studies identified and excluded.   | Y | The PRISMA statement is recommended <u>http://prisma-</u><br><u>statement.org/</u> . The PRISMA statement and reference to the<br>PRISMA statement is included in the evidence submission<br>template. For copyright reasons do not replicate the PRISMA<br>statement in documents without the citation. |
| Describe any additional methods to those described above, that were used to identify ongoing and unpublished studies. |   |  |

### 5.2 Relevant studies

**Description:** This section is used to record the administrative details of each study providing evidence in the submission, this can include studies of the intervention and comparators and studies providing efficacy, effectiveness and/or safety data.

**Contents:** Study reference, registration name/number, conflicts of interest, study dates, study location, source of identification, references to linked publications, publication status.

| HTA CORE model domain          | HTA CORE model topic | HTA CORE model Assessment Elements |  |  |
|--------------------------------|----------------------|------------------------------------|--|--|
| Clinical effectiveness         | -                    | -                                  |  |  |
| Safety                         |                      |                                    |  |  |
| Related EUnetHTA guidelines: - |                      |                                    |  |  |

General notes on using and adapting this section:

The agency's definition of a relevant study needs to be included in the evidence submission template e.g. this could include all studies in the indication under assessment, only randomised controlled data or only studies that reflect the PICO aspects defined in the submission.

The text and the table will need adapting depending on agency methods and acceptability of randomised and non-randomised data as well as acceptability of published, ongoing and unpublished data.

### General notes on using and adapting this section:

Agencies may wish to identify whether the company should focus on particular outcomes when reporting study outcomes. The evidence submission template currently reflects those included in the HTA CORE model REA application: mortality, morbidity, function, health-related quality of life and patient satisfaction.

Agencies who want to appraise a companies' network meta-analysis should request this section as well.

| HTA CORE<br>model<br>reference | Question:  | In short<br>form | Adaptation notes   |
|--------------------------------|--|------------------|--|
|                                | Describe the relevant endpoints, including the definition of the endpoint, methods of data collection and methods of analysis.               | Y                | A table is provided to facilitate completion. In the short form the company is requested only to provide a definition of the endpoint and methods of analysis. |
|                                | If any outcomes, studies or study arms are excluded from<br>the summary of clinical outcomes provide a justification for<br>their exclusion. |                  | A table is provided to facilitate completion.  |
| D0001, D0005                   | Provide a summary of the study results for each relevant   | Y                | Example tables are provided for dichotomous and continuous   |

### 5.8 Risk of bias at outcome level

Uses: Pharmaceuticals and medical devices Description: This section is used to record the risk of bias in outcomes used in the evidence synthesis in this submission. This is bias assessed for each study outcome (clinical outcomes and safety outcomes), therefore if a study provides more than one outcome in the analysis there will be more than one assessment of bias. It is used for randomised studies.

| Contents: Blinding of outcome assessor, intention to treat (ITT) implementation, complete outcome reporting, other aspects of outcome bias. |  |  |  |  |

### General notes on using and adapting this section:

Agencies who complete their own independent assessment of the evidence may not need a company to do a full critical appraisal of the evidence if this is to be repeated by the agency. Consider whether a risk of bias assessment is required for both studies of the intervention and of the comparators for the assessment process and adapt the template text accordingly.

| Overall bias.  | Companies are asked to respond low/moderate/serious/critical/no information. |

## 5.10 Methods of evidence synthesis

Uses: Pharmaceuticals and medical devices Description: This section is used to record methods of evidence synthesis e.g. narrative synthesis, meta-analysis, indirect comparisons, mixed treatment comparisons or network meta-analysis.

**Contents:** Type of synthesis, outcomes and comparators in synthesis, studies included in synthesis, justifications, syntheses of subgroup data, methods used for synthesis, heterogeneity, consistency, publication bias, sensitivity analyses.

| HTA CORE model domain  | HTA CORE model topic | HTA CORE model Assessment Elements |
|------------------------|----------------------|------------------------------------|
| Clinical effectiveness | Domain methodology   | -                                  |
| Safety                 |                      |                                    |
|                        |                      |                                    |

#### Related EUnetHTA guidelines:

Direct and indirect comparisons: <u>http://www.eunethta.eu/sites/5026.fedimbo.belgium.be/files/Direct%20and%20indirect%20comparisons.pdf</u> See also <u>http://mdm.sagepub.com/content/33/5/679.full.pdf+html</u> for a reviewers' checklist for the reporting of network meta-analyses.

### General notes on using and adapting this section:

Agencies accepting meta-analyses and network meta-analyses should also request information in the sections about:

- identification of the studies of the intervention and comparator,
- study descriptions for the intervention and the comparators,
- study results for the intervention and the comparators, and
- risk of bias assessment.

This is to enable agencies to assess the appropriateness and robustness of the analysis. In addition, for network meta-analysis appendices should be requested for the data that were entered into the network meta-analysis and the computer code used to run the analysis.

This section requesting the methods of evidence synthesis should be used with the next section requesting the results of evidence synthesis.

| HTA CORE  | Question:  | In short | Adaptation notes  |
|---|--|----------|---|
| model   |  | form     |   |
| reference   |  |          |   |
| EUnetHTA<br>methodology<br>guidelines and<br>HTA CORE | State the type of synthesis (e.g. narrative, meta-analysis, indirect or mixed treatment comparison) and justify the approach taken.                      |          | The text should be adapted by agencies who do not accept<br>network meta-analyses. The types of synthesis are not mutually<br>exclusive, e.g. meta-analysis may be completed before network<br>meta-analysis. |
| model<br>methodology                                  | State the outcomes included in the synthesis and the time<br>point for the collection of outcome data. Justify the choice of<br>outcomes and time point. |          |   |
|   | State whether any syntheses of subgroup data are being presented. Justify the subgroups chosen.  |          |   |
|   | State the comparators included in the synthesis, indicate whether any comparators have been added to the synthesis                                       |          |   |

50

51

| (e.g. to help create a network of evidence) or excluded from<br>the synthesis (e.g. because of an absence of data) and<br>justify.  |   |
|---|---|
| Where a quantitative approach is used, list the studies informing the synthesis showing the comparisons made by the studies. Justify any exclusions from the synthesis.   | Tables are provided to facilitate completion. The first table could<br>also be substituted with a network diagram with the studies<br>included and the links they create included diagrammatically. |
| Describe the methods used to synthesise the evidence:   |   |
| <ul> <li>Meta-analysis: state methods and models used and<br/>justify these. If Bayesian methods are used, justify<br/>the priors chosen.</li> </ul>  |   |
| <ul> <li>Indirect or mixed treatment comparisons: state the<br/>statistical model, software and whether a fixed or<br/>random effects model has been used. Justify the<br/>choice of methods. If Bayesian methods are used,<br/>justify the priors chosen.</li> </ul> | Agencies should request as appendices the computer code and tables of the actual study data included in the indirect or mixed treatment comparison.   |
| Narrative review, give details of the methods used.   |   |
| Discuss the extent to which the studies may be considered (1) homogenous as a group and (2) representative of the target population and treatments.   |   |
| State how heterogeneity in the relative treatment effects was assessed and give evidence of the degree of heterogeneity in each of the pairwise comparisons.  |   |
| If network meta-analysis is used, state how consistency between direct and indirect comparisons was assessed. Highlight any inconsistencies in comparisons.   | For network meta-analysis only.   |
| State how publication bias was assessed and give evidence to justify whether or not publication bias is presumed to be present.   |   |
| Describe the sensitivity analyses done. If conclusions are<br>sensitive to outliers or influential studies, present sensitivity<br>analyses.  |   |

# 5.11 Results of evidence synthesis

| Uses: Pharmaceuticals and medical devices  |   |  |  |  |

| HTA CORE<br>model<br>reference                                 | Question:  | In short<br>form | Adaptation notes |  |
| EUnetHTA<br>methodology<br>guidelines and<br>HTA CORE<br>model | Summarise the internal validity of the evidence base, taking<br>into account the study quality, the validity of the endpoints<br>used as well as the overall level of evidence. Include a<br>statement about the consistency of the results observed in<br>the evidence base.  | Y                |                  |  |
| methodology  | Provide a brief statement of the relevance of the evidence base to the scope of the assessment.  | Y                |                  |  |
|  | Identify any factors that may influence the extent to which<br>the study results may be applied to patients in routine<br>clinical practice; e.g. how the technology was used in the<br>trial, issues relating to the conduct of the trial compared with<br>clinical practice, or the choice of which patients are suitable<br>for the technology. |                  |                  |  |

# 5.14 Safety risk management (pharmaceuticals)

| Uses: Pharmaceuticals  |   |  |  |  |  |
|--|---|--|--|--|--|
| Some questions are relevant or   | Some questions are relevant only for technologies launched.   |  |  |  |  |
| <b>Description:</b> This section is us   | ed to obtain information about how  | w risk arising from use of the technology should be managed and changes that have been |  |  |  |
| made since marketing authorisa   | ation to manage identified risks.   |  |  |  |  |
|  | Contents: Methods of optimising or limiting service to minimise risk, changes to marketing authorisation as a result of safety, other harms appearing after |  |  |  |  |
| granting of marketing authorisa  | tion.   |  |  |  |  |
| HTA CORE model domain  | HTA CORE model domain HTA CORE model topic HTA CORE model Assessment Elements   |  |  |  |  |
| Safety Safety risk management C0061, C0062, C0063  |   |  |  |  |  |
