

Views on successes, value and impact of JA2 collaboration for non-pharma technologies

Yves, Verboven, Director Market Access & Economic Policies, Eucomed

Has European HTA been of value from Eucomed perspective?

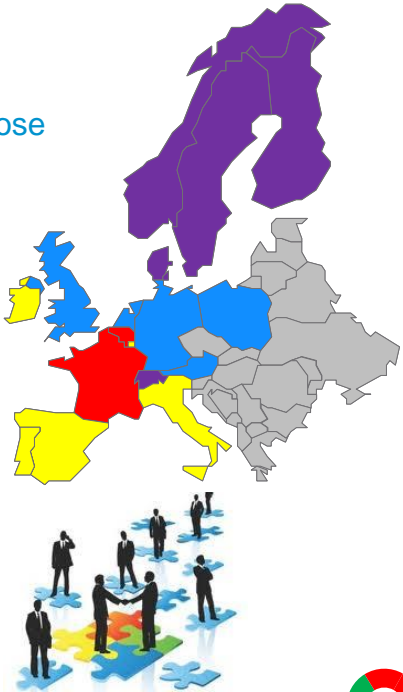

Promotion innovation for patient and society

Multiple demands – Predictability - Fit for purpose

Joint production
Quality & efficiencies

Stakeholder involvement

www.eucomed.org

Health outcomes and economic value in support of efficient, resilient health systems

Specific methods

Eucomed experience can be divided into 3 points

3 levels of cooperation between Eucomed and EUnetHTA JA2

Join production – pilots

- Full Core HTA
- Rapid REA
- Early Dialogue

- ScienceDirect Overview of three European projects

Methodologies development

- Guidelines adapted to medtech
- Position papers on evidence generation
- Submission template

- Guidelines for therapeutic MD

Stakeholder involvement in general

- Eucomed member of Stakeholder Forum
- Eucomed member of SAG
- Expert meetings

European HTA Network Recognizes That

- Trust is a precondition for a *successful cooperation ... through expertise, development of capacities, and high quality output.*
- Cooperation is based on good governance, including: ...*appropriate stakeholder involvement.*
- Cooperation should respond to the *needs of different target audiences ... payers, developers of health technologies* and provide support for decision-making in health care.
- HTA can be *instrumental in promoting innovation* that delivers better outcomes for patients and society as a whole
- *It provides evidence-based information and analysis useful*
 - in making decisions on how to allocate resources
 - achieve sustainable healthcare systems
- *Increase use, quality and efficiency of HTA...* in decision-making, in accordance with national practices and legislative frameworks
- BUT on Recognition of specificities of medical devices:
 - No specific reflection papers
 - No seat for medical technologies
 - No synergy HTA – Decision makers
 - EMA hosting

Discussion paper: Added Value EU HTA Cooperation for MDs

- Conclusionforthcoming Joint Action should contribute to better possibilities for a sustainable health care system in Europe
- ... Better possibilities for appropriate disinvestment in Europe
-HTA Network should strengthen its cooperation, in line with MS roles and responsibilities, to realize the expected benefits for patients, healthcare systems and society as whole.

However some conclusion are:

- Harmonization in ... quality assurance for medical devices
- Lowering the risk of introducing harmful technologies in Europe
- There is a strong need for joint HTA in Europe and compulsory, long-term follow-up in order to not to expose European patients to (often) premature experimental devices.

THANK YOU
